---

The "National Center for Documentation & Research" Abu Dhabi has chosen Ignition solution for the management of its audio visual archives.

The current system installed and operational in 2014 is designed to manage the digitization of documents, movies in 16mn & 35mn and photo heritage. It also allows media documentation and their exploitation for publication using Ignition Workflow Engine.

The choice was done on Ignition for its flexibility of use and configuration, as well as for the native capacity of the system to work in Multi language. (Unicode)
